Kittapon Junsupakul (Pipe)

Software Engineer, Frontend · LINE MAN Wongnai · Bangkok, Thailand

Summary

Frontend engineer at LINE MAN Wongnai since 2020. I build the commerce flows people use inside the LINE MAN app (subscriptions, deals, group orders and payments) and the shared SDKs, design systems and tooling other teams build on. 2,414 merge requests across 98 repositories since 2020.

Experience

Software Engineer, Frontend · LINE MAN Wongnai · LINE MAN team — 2023 – Present

- Led frontend delivery of the LINE MAN VIP subscription: package landing, quote and checkout (QR PromptPay, K PLUS), VIP profile, and manage and cancel flows, later extended to a LINE Premium partnership.
- Built Lock Promotion (Lock Deal) from scratch, then shipped bulk purchase, refunds, sorting, filters and flash-deal countdowns through Unleash A/B experiments.
- Delivered Group Ordering across the webview, SDK and UI library, from the participant flow to split bill and billing options.
- Built payment integrations: TrueMoney on the core SDK and the v2 Select Payment page used by deals, VIP and packages.
- Set up the micro-frontend platform behind the new LINE MAN admin, and led the move from Yarn to pnpm across 10+ repositories.

Wongnai team · Wongnai.com, E-Commerce, design systems and internal tools — 2021 – 2022

- Delivered the Business Menu epic on Wongnai.com and the E-Commerce home revamp, Deal 2.0 order pages, and deal, voucher and privilege flows.
- Built components and design tokens for Design System 2.0 and delivered Wongnai dark mode end to end.
- Built an internal operations automation tool for LINE MAN (bulk coupon, reward, banner and price-engine scripts).

Lead Frontend Developer · Siriraj e-Portfolio (freelance) — Feb 2020 – Jul 2023

- Built the assessment flows (EPA, DOPS and procedural skills), exams and 360-degree evaluations, mentorship appointments, and a research timeline.

Frontend Developer · Seek (freelance) — Jun – Oct 2022

- Built home banners, profile and children management, and the order participant and payment forms, with server-side rendering and cached data fetching.

Software Engineer, Frontend Intern · Wongnai Media — Apr – Sep 2020

- Built the self-pickup ordering flow on Wongnai Delivery web (location, cart, checkout, payment and order tracking) in React SSR.

RFCs and POCs

- Co-authored the RFC for the new LINE MAN admin (micro-frontend shell over the legacy Vue 2 admin) and led its migration, CI and production hosting re-architecture. (RFC, 2023)
- Proposed and built @lmwn/steak-management, a Jotai-based state and data library that replaced React Query plus Recoil in the webview. (RFC, 2024)
- Proposed and built a recruitment service that gives live-coding candidates temporary, budget-capped LLM access. (RFC, 2026)

Skills

Frontend	TypeScript, React 18/19, Vue 3, Next.js, Jotai, TanStack Query, MobX, styled-components
Platforms	In-app WebView, LINE LIFF, Micro-frontends, Design systems, Node.js BFF
Tooling	Vite, Rollup, Rolldown, pnpm monorepos, Vitest, Jest, Playwright, MSW
Delivery	GitLab CI/CD, Docker, Unleash A/B testing, Sentry, GA4, Braze

Education

B.Eng. Computer Engineering · Kasetsart University — GPAX 3.38
