Kittapon Junsupakul (Pipe)

Senior Software Engineer II, Frontend · LINE MAN Wongnai · Bangkok, Thailand

Summary

Software engineer at LINE MAN Wongnai since 2020, focused on frontend, frontend architecture and developer tooling. I build the commerce flows people use inside the LINE MAN app (subscriptions, deals, group orders and payments) and the shared SDKs, design systems and build tools other teams build on.

Experience

Senior Software Engineer II, Frontend · LINE MAN Wongnai — 2020 – Present

Joined Wongnai as a part-time frontend engineer in 2020 and went full-time in May 2021. Worked on Wongnai.com and its shared libraries, then moved to LINE MAN commerce in 2023.

Senior Software Engineer II Feb 2026 – Present Senior Software Engineer Jul 2024 – Jan 2026
Junior Software Engineer II Apr 2022 – Jun 2024 Junior Software Engineer May 2021 – Mar 2022

LINE MAN · Commerce flows inside the LINE MAN app, shared SDK and platform tooling — 2023 – Present

- Led frontend delivery of the LINE MAN VIP subscription end to end: package landing and detail, quote and checkout (QR PromptPay, K PLUS, payment pre-selection), VIP profile, and manage and cancel flows across the webview, shared SDK, UI and type libraries.
- Extended VIP into a LINE Premium partnership with a redemption subscription type, API-driven bonus benefits and reusable partnership cards.
- Built Lock Promotion (Lock Deal) from scratch: quote, order creation and detail, My Lock Promotion, deeplink highlighting and payment error fallbacks. Then shipped the grid redesign, sorting and sort-by filter, flash-deal countdown, and bulk purchase, refund and badge flows, each rolled out through Unleash A/B experiments with analytics.
- Delivered the frontend of Group Ordering across the webview, SDK and UI library: participant flow (shared cart, order summary, live order status, host notifications), then split bill and billing options.
- Built payment integrations: TrueMoney on the core SDK, the v2 Select Payment page (LINE Pay wallet, Rabbit LINE Pay, credit card, auto-registration, unified error handling) and QR PromptPay payment for packages.
- Built the LINE Pay digital-wallet merchant KYM flow: camera capture and cropping, ID card, selfie and bank book verification, OTP, pre-registration, application status and QR code pages.
- Built core pieces of the new LIFF food ordering (pin address, cart and quote sync, payment app integration), then migrated the remaining LIFF pages to React 18 with code splitting and shipped self pickup on LIFF.
- Shipped Single Meal demand shaping, Menu Collection pages with Google Ad Manager banners, and Braze in-app messaging for the webview (SDK controller, auth, message sanitizing, kill switch).
- Set up the micro-frontend platform behind the new LINE MAN admin (module federation, Vue 3 and React fragments, shared OIDC auth, CI/CD, Sentry) and moved users off the legacy admin with a remote-config redirect.
- Built a design and prototyping playground: monorepo, playground engine with design inspector and docs matrix, about 60 migrated design-system components and production screens, and a flow mode with flow maps.
- Built Steak Management v2, a shared state and data-access library on Jotai and TanStack Query, and used it to extract feature modules in the webview.
- Led the Yarn-to-pnpm migration across 10+ repositories with an internal package store and supply-chain safeguards, moved shared libraries to Rolldown, and introduced versioned OTA deploys.
- Improved release quality: single-branch CI/CD, shared release and revert jobs, a Slack and GitLab release-alert tool, and a Playwright E2E monorepo with parallel CI.
- Brought LINE MAN Design System 3.0 into @lineman/ui and migrated consuming apps.

Wongnai · Wongnai.com, E-Commerce, design systems and internal tools 2021 – 2022

- Delivered the Business Menu epic on Wongnai.com: recommended menu, menu, menu item and photo pages, backed by new BFF APIs, plus a redesigned review section.
- Built E-Commerce experiences: the home landing revamp with section-level tracking, Deal 2.0 order history and details, and deal, voucher and privilege flows across web, delivery web and the BFF.
- Built components, design tokens, atomic CSS and theming for Ignite (Design System 2.0) and migrated product pages onto it.
- Delivered Wongnai dark mode end to end: design-system colour migration, a dark-mode controller, a display-setting API in the Go gateway, and the user-facing theme setting.
- Built an internal LINE MAN operations automation tool from scratch: bulk coupon, reward, banner and price-engine scripts with audit logs, page-level authorization, Slack notifications and run reports.
- Created kyo-rollup, a shared Rollup and esbuild build package, and rolled it out across the icons, hooks, utils, UI and shared-module libraries.
- Built a Chrome extension for inspecting and testing analytics events on the Wongnai web.
- Fixed web penetration-test findings (stored and DOM-based XSS, autocomplete on sensitive forms) and gated analytics trackers and ads on cookie consent for PDPA across four web apps.
- Built the LMWN careers website.

Wongnai Delivery (part-time) · Wongnai Delivery web, Wongnai.com deals and the Wongnai UI library 2020 – Apr 2021

- Built the self-pickup ordering flow on Wongnai Delivery web (location selection, cart, checkout, payment and live order tracking) in React SSR.
- Added order history and reorder across the delivery web, shared modules and types, with a new BFF food-order endpoint.
- Contributed photo grid, carousel, layout, modal, stepper and form components to the Wongnai UI library.
- Redesigned the deal detail page and added credit-back and flash-deal experiences on Wongnai.com.

Lead Frontend Developer · Siriraj e-Portfolio (freelance) Feb 2020 – Jul 2023

Web e-portfolio and assessment platform for Siriraj medical students and residents, with separate student, teacher and admin views. Wrote 688 of the project's 732 commits.

Siriraj e-Portfolio · React 17, TypeScript, MUI 5, MobX and Recoil, Chart.js, pdfmake, Docker 2020 – 2023

- Built the assessment flows (EPA, DOPS and procedural skills), exams and revision exams, and 360-degree evaluations with full create, edit and review screens.
- Built mentorship appointments, mentee pages and templates, and revamped the research module with a timeline.
- Generated student transcripts as PDFs and added progression, radar and grading charts.
- Set up releases with semantic versioning, Docker and nginx hosting, Sentry and GA4, and upgraded to React 17, MUI 5 and webpack 5 with code splitting and caching.
- Co-wrote the role-based product specs (admin, student, teacher) for the phase 2 modules.

Frontend Developer · Seek (freelance) Jun – Oct 2022

Customer website for an activity and event booking platform, built by a multi-developer team.

Seek web · Next.js 12, React 18, TypeScript, react-query, styled-components 2022

- Built home banners, navigation and menu templates, profile and children management, and the order participant and payment forms.
- Added server-side rendering with react-query hydration and cached requests, fixed SSR cookie handling, and added SEO meta tags.
- Added a number input and icons to the shared Seek design-system package.

Software Engineer, Frontend Architecture · Barcamp Bangkhen 2020 Oct – Nov 2020

Set up the frontend system and core pages for the Barcamp Bangkhen website.

RFCs and POCs

Kyo Rollup · Guide — 2021

Designed and documented a shared Rollup preset library (CJS, ESM, UMD and dual builds) with plugins for package exports, NodeNext-safe type imports, source-map paths and lodash interop.

Wongnai dark mode (OKR Q1 2022) · Tech design — 2022

Sole owner of the dark-mode OKR: mapped legacy colours to Design System 2.0 and migrated all 1,743 CSS colours across 728 files, bringing 113 of 118 pages to dark-mode support.

Cinnamon CLI and boilerplates (OKR Q2 2022) · Tech design — 2022

Led the CLI part of a six-person boilerplate OKR: built @lmwn/cinnamon, which clones built-in or custom boilerplates and merges package templates and chained dependencies.

LINE MAN Automate Script · RFC — 2022

Co-authored the RFC for a VPN-only web app that lets operations staff run bulk coupon and reward scripts with their own admin token, replacing scripts only developers could run.

Budibase hosting · RFC — 2022

Co-authored a low-code platform evaluation and a proposal to self-host Budibase on AWS after measuring about 5x faster queries than the cloud plan.

New LINE MAN admin (React micro-frontends) · RFC — 2023

Wrote the RFC and schema design for a micro-frontend admin shell that loads the legacy Vue 2 admin and the automation tool under one auth, then led the migration, shared state, CI and domain move.

Core Analytic · Tech design — 2023

Designed a shared analytics library for screen names and click sources (session-backed screen stack, previous-screen and view-time tracking).

Google Fleet Engine trip tracking · POC — 2023

Prototyped live trip tracking on the web with Google On-Demand Rides and Deliveries (journey-sharing map, token fetching, request-header injection through a service worker).

Web loading measurement · POC — 2024

Prototyped a "ready to use" metric for webviews that waits for tagged API calls and in-view images through a MutationObserver instead of relying on window.onload.

Steak Management · RFC — 2024

Proposed replacing React Query plus Recoil with one in-house Jotai-based state and data library to remove cross-library sync renders; it later shipped as @lmwn/steak-management.

Google Ad Manager on campaign pages · POC — 2024

Designed an ad-banner section type for campaign pages backed by Google Ad Manager, including the admin config and ads.txt, then shipped it.

VIP recurring subscription, frontend scope · Tech design — 2025

Wrote the page-by-page frontend design and estimate for the VIP recurring subscription (browse, checkout, manage, cancel, re-subscribe, suspend, errors) before leading its build.

QR PromptPay for self pickup · POC — 2025

Wrote the frontend design and scope for QR PromptPay payment on self-pickup orders (QR page with countdown, help center, ordering-flow and error changes) and added its E2E test.

styled-components to Linaria · POC — 2025

Compared Linaria, Pigment CSS and vanilla-extract as zero-runtime replacements for styled-components and prototyped a compatible wrapper with build plugins.

LMWN pnpm store and migration guide · Guide — 2025

Built and documented a shared pnpm package store and CI cache for frontend projects, with a step-by-step Yarn and npm migration guide.

RFC template for LINE MAN Web · Guide — 2025

Created the frontend RFC template covering design-system impact, caching, native bridges, API errors, feature flags and security (CORS allowlists, XSS sanitizing).

Web E2E project structure · Tech design — 2025

Redesigned the Playwright E2E monorepo around page objects and reusable journeys built on fixtures so QA can write tests faster.

Group Ordering split bill · POC — 2025

Designed the participant join and cart-lock flow for split-bill Group Ordering with platform-specific payment rules for LIFF and the app, then shipped it in 2026.

Braze in the LINE MAN webview · POC — 2026

Prototyped and then shipped Braze in the webview: attribute sync with the app, event naming, property flattening under Braze limits, session wipe on close and JWT-based SDK auth.

Frontend recruitment service · RFC — 2026

Proposed a service that issues temporary, budget-capped LLM keys to live-coding candidates behind Okta-protected admin APIs and a rate-limited completion proxy.

AI-generated E2E tests · POC — 2026

Prototyped generating Playwright E2E tests from a screen recording with an AI agent following repo conventions.

Merge requests by year

Merge requests I opened on the company GitLab, by year created.

Year	MRs	Repos	Main work
2020	150	14	Wongnai Delivery self pickup
2021	277	25	Business Menu, Design System 2.0
2022	232	35	E-Commerce home, dark mode, ops tool
2023	373	39	Group Ordering, LIFF food ordering
2024	361	42	LINE Pay merchant KYM, new admin
2025	461	37	VIP subscription, Lock Promotion
2026	560	37	Lock Deal, payments, UX Playground
Total	2,414	98	

Selected work

LINE MAN VIP subscription · LINE MAN app — 2025 – 2026

Monthly membership sold inside the LINE MAN app: plan selection, checkout, VIP profile, manage and cancel, and a LINE Premium partnership offer.

React · TypeScript · Shared SDK · Unleash

Lock Promotion · LINE MAN app — 2025 – 2026

Lets users lock in a restaurant deal before ordering. Built the first version, then bulk purchase, refunds, sorting, filters and flash-deal countdowns.

React · TypeScript · A/B testing · Analytics

Single Meal · LINE MAN app — 2026

Single-portion menus with no minimum order and free delivery. Built the listing with "others are ordering" badges, empty states, onboarding tooltips and dynamic navigation.

React · TypeScript · Unleash · Analytics

Group Ordering · LINE MAN app — 2023 – 2026

Several people add to one food order from their own phones. Built the participant flow, shared cart, live order status, split bill and billing options.

React · TypeScript · Design System 3.0

LINE Pay merchant onboarding · LINE Pay digital wallet — 2024

Know-your-merchant web flow: ID card, selfie and bank book capture with cropping, OTP, pre-registration, application status and the merchant QR code.

React · TypeScript · Camera API

LMWN Careers · careers.lmwn.com — 2021 – 2024

Company careers site with teams, perks, life at LMWN and job listings. Built the first version and later the Careers V2 update.

React · TypeScript · SSR

Siriraj e-Portfolio · Freelance — 2020 – 2023

Assessment and e-portfolio platform for Siriraj medical students and residents: evaluations, exams, mentorship, research and PDF transcripts. Lead frontend developer.

React · TypeScript · MUI · MobX · pdfmake

Seek · Freelance — 2022

Activity and event booking site. Built profiles with children management, order and payment forms, and server-side rendering.

Next.js · TypeScript · react-query

Wongnai dark mode · Wongnai.com — Dec 2021 – Mar 2022

Moved Wongnai web from DS1 and legacy styles to Design System 2.0 tokens so the whole site could switch themes, with a saved theme setting per user.

React · styled-components · Design tokens

Wongnai Tracking Inspector · Internal tool — Nov 2021

Chrome extension that shows analytics events as they fire on the Wongnai web, used to test tracking before release.

Chrome extension · React · styled-components

Wongnai pickup web · Wongnai Delivery — May – Jul 2020

Ordering website for picking up food yourself, from choosing a branch to tracking the order.

React · MobX · GraphQL · styled-components

Projects

Di-Planista · Side project — Nov 2020 – Mar 2021

Responsive trip planner to create and manage trips, search places with filters and discover other trips. planistra.netlify.app

Rainy · University project — Jan – Apr 2020

Rainfall forecasting and visualization site with current meteorological, air quality and rainfall data. opendata-app.hii.or.th/rainy

Planistra (IWGU) · University project — Sep – Nov 2019

Trip planner built by a student team using Scrum. iwgu.netlify.app

KU Schedule · Side project — Apr 2019

Generates a class timetable for Kasetsart University students. ppipee.github.io/KUSchedule

Scan Skin · Side project — May – Jul 2019

Compares skincare products across top brands.

Skills

Frontend	TypeScript, React, HTML, CSS
Familiar with	Vue, Go, Python, Node.js, AST tooling
Platforms	In-app WebView, LINE LIFF, Micro-frontends (module federation), Design systems
Build and tooling	Vite, Rollup, Rolldown, esbuild, pnpm monorepos
Testing	Vitest, Jest, Playwright, MSW

	Delivery	GitLab CI/CD, Docker, Unleash feature flags, A/B testing, Sentry

Education

B.Eng. Computer Engineering · Kasetsart University — GPAX 3.38
